

IN THE CLAIMS

Please amend the claims as follows:

1 (Currently Amended). A mail-arrival notification system, comprising:

a mail-arrival monitoring apparatus configured to judge based on a given mail-arrival notification condition information whether an electronic mail including an attached file arriving at a prescribed mail server is an urgent mail or not based on a keyword included in said electronic mail, and for, when said electronic mail is an urgent mail, to generate a summary of said urgent mail, and to transmit said summary together with a mail-arrival notifying signal excluding said attached file to a mail destination designated by said mail-arrival notification condition information;

a mobile communication terminal configured to notify a user of arrival of said urgent mail, in response to said mail-arrival notifying signal transmitted from said mail-arrival monitoring apparatus, and to transmit an acquisition instructing signal to a remote information processing apparatus in order to instruct said remote information processing apparatus to acquire said urgent mail and attached file; and

said remote information processing apparatus configured to acquire said urgent mail including said attached file from said mail server, in response to receiving said acquisition instructing signal transmitted from said mobile communication terminal by a receiving unit in said remote information processing apparatus, said receiving unit is configured to output a wake-up instruction to a power control unit to force the power control unit to supply power to respective circuits of the remote information processing apparatus.

2 (Previously Presented). The mail-arrival notification system according to claim 1, wherein said mobile communication terminal is configured to transmit said acquisition instructing signal when a prescribed acquisition instructing operation is performed under

receipt of said mail-arrival notifying signal.

3 (Previously Presented). The mail-arrival notification system according to claim 1, wherein said mobile communication terminal is configured to transmit said acquisition instructing signal by radio; and said information processing apparatus receives said acquisition instructing signal by radio.

4 (Previously Presented). The mail-arrival notification system according to claim 3, wherein said information processing apparatus is configured to acquire said urgent mail via said mobile communication terminal.

5-14 (Canceled).

15 (Currently Amended). A mobile communication terminal, comprising:
~~receiving means for receiving~~ a receiving unit configured to receive a mail-arrival
notifying signal together with a summary of an electronic mail to make a notice that said
electronic mail arriving at a prescribed mail server is an urgent mail; ~~and~~
~~transmitting means for transmitting~~ a transmitter configured to transmit an acquisition
instructing signal to a remote information processing apparatus to instruct said information
processing apparatus to acquire said urgent mail including an attached file; and
a sound generation unit configured to generate a predetermined mail-arrival sound
from a speaker of the mobile communication terminal in response to reception of the mail-
arrival notifying signal.

16 (Currently Amended). The mobile communication terminal according to claim 15, wherein said receiving ~~means-receives~~ unit is configured to receive said mail-arrival notifying signal over a public radio circuit network.

17 (Currently Amended). The mobile communication terminal according to claim 15, wherein said receiving ~~means-receives~~ unit is configured to receive said mail-arrival notifying signal from a prescribed mail-arrival monitoring apparatus which judges an electronic mail arriving said mail server, by radio communications for short distance.

18 (Canceled).

19 (Currently Amended). The mobile communication terminal according to claim 15, wherein said ~~transmitting means-transmits~~ transmitter is configured to transmit said acquisition instructing signal including a Message-ID of an electronic mail that is judged as an urgent mail, included in said mail-arrival notifying signal.

20 (Currently Amended). The mobile communication terminal according to claim 15, wherein said ~~transmitting means-transmits~~ transmitter is configured to transmit said acquisition instructing signal to a prescribed information processing apparatus by radio communications for short distance, in response to an operation button which is operated by a user to instruct transmission of said acquisition instructing signal.

21 (Currently Amended). An information processing apparatus, comprising:
~~receiving means for receiving~~ a receiving unit configured to receive an acquisition instructing signal transmitted from a remote prescribed mobile communication terminal,

according to a mail-arrival notifying signal to make a notice that an electronic mail arriving a prescribed mail server is an urgent mail, wherein said receiving unit is configure to output a wake-up instruction to a power control unit to force the power control unit to supply power to respective circuits of the information processing apparatus; and

a mail acquiring ~~means for acquiring~~ unit configured to acquire said urgent mail including an attached file from said mail server in response to said acquisition instructing signal received from said mobile communication terminal.

22 (Currently Amended). The information processing apparatus according to claim 21, wherein said receiving ~~means-receives~~ unit is configured to receive said acquisition instructing signal from said mobile communication terminal by radio communications for short distance.

23 (Currently Amended). The information processing apparatus according to claim 21, wherein said mail acquiring ~~means-acquires~~ unit is configured to acquire said urgent mail from said mail server based on the Message-ID of said electronic mail included in said acquisition instructing signal.

24 (Currently Amended). The information processing apparatus according to claim 21, wherein said mail acquiring ~~means-acquires~~ unit is configured to acquire said urgent mail from said mail server via a prescribed mobile communication terminal by radio communications for short distance.

25-29 (Canceled).
